

Case History

Customer: Avon Products

Location: Cincinnati, OH

Machine: LF840-8 Line Filler

Application: Cosmetic Liquid Filling. This LF840-8 line filler for Avon Products is filling 1 to 14 ounce containers with various hydro-alcohol cosmetics (cologne sprays, roll-ons, bath oils, hair sprays, liquid talc & other products) at speeds of approximately 60 containers per minute, filler is capable of speeds up to 120 containers per minute.

Avon Products needed to rebalance products and equipment in their plant (taking a lot out and putting a lot in) and eventually they determined a new filling line was needed for increased capacity. Avon Products, Inc. is the largest direct-seller of beauty-related products in the world.

Features

316 Stainless Steel Contact Parts

Perfect Filler for Creams, Shampoos & Lotions

Speeds up to 120 Containers per Minute

Avon decided on a new updated version of the Cozzoli filler that has been running in their facility for 35 years. Avon prefers hand-loading, and the conveyor has locating lugs that can accommodate containers of many sizes and shapes. This LF840 is a continuous-motion walking-beam filler where the nozzles move with the bottles, filling as they travel.

Case History, Continued

The Avon Springdale, OH facility employs approximately 2,000 people with 50 filling lines. Their plant is roughly 25 acres under one roof.
