

Case History

Customer: Orly International

Location: Los Angeles, CA

Machine: RFPC – Rotary Filler Plugger Capper

Application: Orly International is running nail polish into 15 ml containers at speeds of 70 to 80 containers per minute on their Cozzoli Rotary Filler, Plugger & Capper.

Features

Speeds up to 200 cpm depending on application

Intermittent Motion

Allen Bradley Programmable Logic Controller

Orly is a provider of upscale nail enamel and nail care products running 50,000 vials a day, 5 days per week. Nail polish is commonly filled on a fill-to-level filling machine, but the Cozzoli pumps are so accurate, and thin glass so consistent, that volumetric filling method was their best choice.

The Rotary Filler Plugger Capper can be formatted for a number of applications such as fill/plug/cap, fill stopper/cap, fill stopper/aluminum seal, etc. This machine can handle plugs with dip tubes, combination pump caps and pipettes.
